

# Applied Social Data Science - Coding Camp

Marina Schenkel

PhD Candidate

September 4 - 8, 2023

# Schedule

- ▶ *Monday: Introduction*
- ▶ *Tuesday: R basics*
- ▶ *Wednesday: R basics + Good practices*
- ▶ *Thursday: Python basics*
- ▶ **Friday: How to write up and report -  $\text{\LaTeX}$**

# Recap

In the last few days we looked at:

# Recap

In the last few days we looked at:

- ▶ Some basics of working in R

# Recap

In the last few days we looked at:

- ▶ Some basics of working in R
- ▶ Some basics of working in Python

# Recap

In the last few days we looked at:

- ▶ Some basics of working in R
- ▶ Some basics of working in Python
- ▶ Some general good practices to follow when doing data science
  - ▶ Organising your work
  - ▶ Being consistent in things like object naming

# Today's class (the final class!)

How to write up and report

# Today's class (the final class!)

How to write up and report

- ▶ For your own projects

# Today's class (the final class!)

How to write up and report

- ▶ For your own projects
- ▶ For doing your class assignments

# Today's class (the final class!)

How to write up and report

- ▶ For your own projects
- ▶ For doing your class assignments

This class is intended to cover the basics and help orient your future learning.

# Today's class (the final class!)

How to write up and report

- ▶ For your own projects
- ▶ For doing your class assignments

This class is intended to cover the basics and help orient your future learning.

We will look at:

# Today's class (the final class!)

How to write up and report

- ▶ For your own projects
- ▶ For doing your class assignments

This class is intended to cover the basics and help orient your future learning.

We will look at:

- ▶ Jupyter Notebook
- ▶  $\text{\LaTeX}$
- ▶ GitHub
- ▶ R Markdown

# Jupyter Notebook

# Jupyter Notebook

- ▶ Jupyter stands for **J**ulia, **py**thon and **r**, the three languages it was initially designed to work with (although it now supports more)

# Jupyter Notebook

- ▶ Jupyter stands for **J**ulia, **py**thon and **r**, the three languages it was initially designed to work with (although it now supports more)
- ▶ Like R Markdown, it provides a format for combining code, results and commentary in a single document

# Jupyter Notebook

- ▶ Jupyter stands for **J**ulia, **py**thon and **r**, the three languages it was initially designed to work with (although it now supports more)
- ▶ Like R Markdown, it provides a format for combining code, results and commentary in a single document
- ▶ Jupyter runs through your web browser

# Jupyter Notebook

- ▶ Jupyter stands for **J**ulia, **py**thon and **r**, the three languages it was initially designed to work with (although it now supports more)
- ▶ Like R Markdown, it provides a format for combining code, results and commentary in a single document
- ▶ Jupyter runs through your web browser
- ▶ It contains two components: a kernel (to run code) and a dashboard (to navigate files)

# Jupyter Notebook

- ▶ Jupyter stands for **J**ulia, **py**thon and **r**, the three languages it was initially designed to work with (although it now supports more)
- ▶ Like R Markdown, it provides a format for combining code, results and commentary in a single document
- ▶ Jupyter runs through your web browser
- ▶ It contains two components: a kernel (to run code) and a dashboard (to navigate files)

## Activity

You already have Jupyter Notebook installed as part of your Anaconda configuration. We will work on turning our script file from Wednesday into a notebook.

# R Markdown

- ▶ R Markdown is a way of combining your code, its results, and your commentary in a single document.
- ▶ It can then be used to create outputs in a variety of formats, including PDFs, Word files, and HTML documents.
- ▶ R Markdown can be used to produce reports, presentations, dashboards and more.

L<sup>A</sup>T<sub>E</sub>X is a free to use software system for typesetting documents. Unlike word processing software such as MS Word - which uses a 'What You See Is What You Get' (WYSIWYG) interface, L<sup>A</sup>T<sub>E</sub>X uses plain text and markup language. As with R and Python, L<sup>A</sup>T<sub>E</sub>X has a steep learning curve. So why use it?

L<sup>A</sup>T<sub>E</sub>X is a free to use software system for typesetting documents. Unlike word processing software such as MS Word - which uses a 'What You See Is What You Get' (WYSIWYG) interface, L<sup>A</sup>T<sub>E</sub>X uses plain text and markup language. As with R and Python, L<sup>A</sup>T<sub>E</sub>X has a steep learning curve. So why use it?

- ▶ It's free

L<sup>A</sup>T<sub>E</sub>X is a free to use software system for typesetting documents. Unlike word processing software such as MS Word - which uses a 'What You See Is What You Get' (WYSIWYG) interface, L<sup>A</sup>T<sub>E</sub>X uses plain text and markup language. As with R and Python, L<sup>A</sup>T<sub>E</sub>X has a steep learning curve. So why use it?

- ▶ It's free ...But so is Libre Office

L<sup>A</sup>T<sub>E</sub>X is a free to use software system for typesetting documents. - ▶ It makes very professional looking documents ...But with a bit of work you can imitate the 'L<sup>A</sup>T<sub>E</sub>X style' in WYSIWYG word processors
- ▶ It has become omnipresent in many quantitative academic fields
- ▶ Many data science applications rely on L<sup>A</sup>T<sub>E</sub>X to create outputs

# Why you need $\text{\LaTeX}$

- ▶ R Markdown uses  $\text{\LaTeX}$  'behind the scenes' to create PDFs. You will therefore need some version of  $\text{\LaTeX}$  installed on your system if you want to create PDFs through R/R Studio.
- ▶ Because R Markdown files can be difficult to debug, in Stats I and II we will be using  $\text{\LaTeX}$ .
- ▶ Overleaf (<https://www.overleaf.com>) (what I use) is an online, collaborative  $\text{\LaTeX}$  editor.
- ▶ TexStudio is an integrated writing environment for creating  $\text{\LaTeX}$  documents. Download at: <https://www.texstudio.org/>.

# GitHub Workflow

# Any Questions?

This concludes Code Camp. Well done on making it through. If you have any additional queries, you can email me at  
`schenkem@tcd.ie`
